

Landscape Designing Portfolio Project

1. Introduction

- Briefly describe the key features of your project.

Scroll taskbar with modal form starts with no background then transitions to a partial transparent background that sticks to the top. Photography of past work i've done is displayed on the home page and also in a carousel on a gallery page. Bootstrap components and display for layout, function and design. Use of font awesome, google fonts, custom icons, bootstrap social.

2. Design and Implementation

Give a detailed description of the design and implementation of your project.

In particular, this section should contain:

- Details of how you converted from design to the actual realization of your project in terms of implementing the code.

I had a good idea about how I wanted my site to look. During implementation I had to scale with bootstrap for sections and containers, definitely do a lot of reading of documentation to ensure that it would display properly at different viewports and function properly.

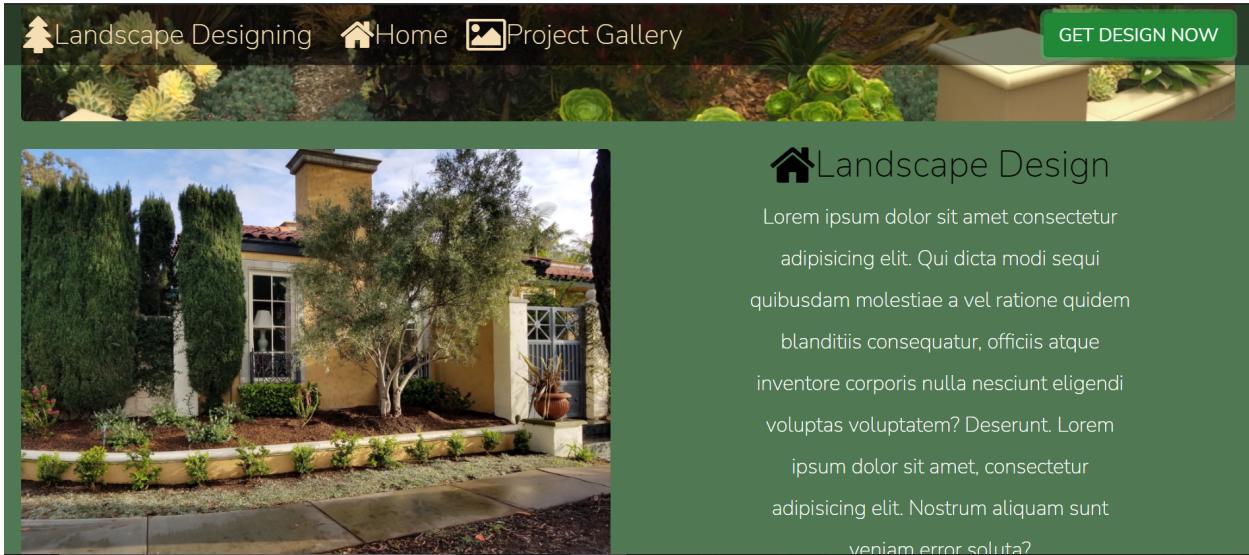

- Any choices that you made, and any modifications that you made to the design, in response to difficulties that you might have encountered while implementing the project.

I was able to implement all of my design ideas, although I did remove a few containers from my original design bc it was too crowded for the display.

- A brief discussion of various components that you used in implementing your project, and the reasons you chose them over alternatives.

I chose to use this type of navbar over others that we did in class bc I didn't want someone to look at my site and say "this is a bootstrap site." I wanted to add a custom look to the nav with bootstrap functionality. I used a modal but I also included a static form page that is accessed from the footer just in case the form has any issues users can still fill out the form and submit it as a fail safe. I used a carousel for gallery images.

- Include a few screenshots of your website in the report.

The screenshot shows a website for "Landscape Designing". At the top, there's a navigation bar with icons for a tree, a house, and a camera, followed by the text "Landscape Designing", "Home", and "Project Gallery". To the right is a green button labeled "GET DESIGN NOW". Below the navigation is a large image of a garden with various plants and a planter. On the left side of the main content area is a smaller image of a well-maintained garden in front of a yellow building with a chimney. To the right of the images is the text "Landscape Design" with a house icon, followed by a paragraph of placeholder text (Lorem ipsum) in a green box.

3. Conclusions

- Discuss what you personally learned from your project.

I learned a lot about the bootstrap nav and modals.

- Discuss the best features and the shortcomings of the project.

The best features would be the nav and modal. I didn't utilize some features like cards. I attempted to place them in different pages but they just didn't look right with my layout.

- Discuss any choices that you might have made differently, in hindsight after completing the project.

I would maybe add some tooltips so when you hover over the photos on the landing page they can have a blurb about the photo to make it more interactive. I had concerns with ease of use/view and adding in more interactive space consuming items.
